CHALLENGE 4
ENGAGING COMMUNITIES

How can we use technology to allow local and international communities to have their say on climate priorities and initiatives?

This challenge invites companies to explore the ways that technology can facilitate international climate discussion as governments and citizens, including local and indigenous communities in affected nations, work together to democratically implement interventions to mitigate climate change and adapt to its effects.

Solutions could cover:
- Forums for direct discussion and democratic processes
- Platforms to support indigenous and local communities to engage in policy and legal processes
- Submitting and voting on ideas and projects
- Participatory budgeting and planning
- International-level discussions and debates
